

LOW USE OF PLANT PROTECTION PRODUCTS

Within Danish Christmas tree production, 13 Plant protection products are used, which are all approved by the Ministry of Environment. By comparison, Danish agriculture uses up to 135 Plant protection products.

The few Plant protection products used in Christmas tree production against weeds and pests are applied only when needed, and Plant protection products are controlled by the authorities to the same extent as within agricultural production. This ensures clean drinking water without the risk of leaching.
